CAREER OBJECTIVE

Fresh Computer Science engineering graduate specialized in Data Science, with over one year of software development (Genuine Internship) experience at Systems Group as an Intern, seeking software development opportunities focused on full-stack engineering, AI integration, and workflow automation in your esteemed organization

TECHNICAL SKILLS

Programming	Python, JavaScript, Java, C, C++, SQL
Frontend and Design	React, HTML5, CSS3, Tailwind CSS, Figma, Adobe XD
Backend and APIs	Node.js, Express.js, Django, REST APIs, GraphQL, WebSocket, MQTT
AI and ML	TensorFlow, OpenAI API, LangChain, SpeechRecognition, pyttsx3
Tools and Platforms	Git, GitHub, Postman, Docker (basics), Unreal Engine, VS Code
IoT and Hardware	ESP32, Arduino, NFC integration, Alexa Skills Kit
Databases	MongoDB, MySQL, Firebase, Redis

EXPERIENCE

Systems Group, Hyderabad | Software Developer Intern | July 2025 - Present

- Developed seven company projects covering construction files, office assets, cafe operations, procurement, employee management, and Unreal Engine presentations.
- Built responsive interfaces and full-stack applications, translating business requirements into tools for daily operations and customer experiences.

PROJECTS

Title: OneCloud

Description:

A cloud-based central repository that provides centralized access to 3D assets and construction files.

Responsibilities:

Designed and developed the frontend using React and the backend using FastAPI. Structured the codebase and integrated Supabase to store and manage application data.

Key Contribution:

Independently delivered OneCloud, taking ownership of frontend development, backend integration, and data management to meet the company’s operational needs.

Technical Stack:

React, FastAPI, Supabase.

Title: Unreal Engine Bridge

Description:

A network bridge interface for live Unreal Engine experiences used in customer demonstrations and business presentations.

Responsibilities:

Designed the frontend interface and backend architecture.

Technical Stack:

React, FastAPI.

Title: Asset Management Software

Description:

An office asset tracking system covering devices, individual components, software licenses, and accessories.

Responsibilities:

Designed the frontend interface and backend architecture.

Technical Stack:

React, FastAPI.

Title: BevOS Beverage Operating System

Description:

A centralized cafe operations system for supply chain, inventory, recipes, customer analytics, and orders, with automatic stock calculations, operational metrics, and restock and expiry alerts.

Responsibilities:

Designed the frontend interface and backend architecture.

Project Achievement:

Independently developed an integrated cafe operations platform with automated stock calculations and restock and expiry alerts to support day-to-day operations.

Technical Stack:

React, FastAPI.

Title: Pixel Streaming

Description:

An interactive 3D preview interface for furniture such as sofas and chairs, with NFC-driven texture changes and a website preview experience.

Responsibilities:

Designed the frontend interface and backend architecture.

Technical Stack:

React, FastAPI.

Title: Procurement Management System

Description:

A procurement management system to record procurement data, compare similar products and prices, estimate reference prices for analytics, and support budgeting and spend tracking.

Responsibilities:

Designed the frontend interface and backend architecture.

Technical Stack:

React, FastAPI.

Title: HRMS

Description:

An attendance and employee tracking portal that maintains employee records and payroll information.

Responsibilities:

Designed the frontend interface and backend architecture.

Technical Stack:

React, FastAPI, Android development.

SELECTED PERSONAL PROJECTS

AI Interview Platform

Built a mock interview platform using Python, OpenAI API, React, and MongoDB to generate domain-specific questions, evaluate responses, and provide feedback.

Technical Stack:

Smart Home Automation

Developed an ESP32-based home automation platform using Python, MQTT, and React, supporting control of 8+ smart devices and voice commands.

Technical Stack:

AI Assistant Jarvis

Created a Python voice assistant using ChatGPT API, Alexa Skills Kit, pyttsx3, and SpeechRecognition to generate documents and control smart home devices.

Technical Stack:

EDUCATION

KL University, Hyderabad

B.Tech in Computer Science - Data Science Specialization

June 2022 - May 2026 | GPA: 8.5/10

CERTIFICATIONS

- AWS Certified Cloud Practitioner | AWS | February 2026 - February 2029
- Salesforce Certified Agentforce Specialist | Salesforce | December 2025
- MongoDB Certified Associate Developer | MongoDB | March 2025 | No expiration
- Certified Advanced Automation Professional | Automation Anywhere | October 2024 - October 2026

ACHIEVEMENTS

- Runner-Up, KL University Hackathon 2024, competing against 40+ teams.
- Maintainer of 6+ open-source GitHub repositories covering full-stack, IoT, and AI projects.
- Recognized by the Director of Research, Professor Jayashankar Telangana Agricultural University (PJTAU), for Full Stack Development contributions to a joint PJTAU-KL University mobile app and web dashboard for insect pest and crop disease detection and diagnosis (Aug 2024 - Jan 2025).
